

# Plucked Patterns

Polyphonic plucked string patterns  
For QuBit Nebulae v.2 - By Devin Powers

This is a custom instrument for the Qu-Bit Nebulae Eurock module. It generates polyphonic plucked string sounds in semi-random patterns with an internal clock. Pitch, tone, speed, attack, and decay can be controlled via knobs or CV input.

- Speed - Controls the rate of generated pluck sounds
- Pitch - Transposes the pitches
- Blend - Controls the attack
- Start - Controls the release
- Overlap - Controls tone of pluck model
- Density - Offsets the chosen pitches either up or down

Ported from Neb v.1 by Chris Erin.
